

Report on Urology Resident's Course and UAA Observership 2011 **Singapore General Hospital**

The Programme was very organized and extensive to cover the general urology and socialized urology both in term of Endo-Urology, Laproscopy. The Programme covered the urology residence course 2011, ELSA (Endoscopic, Laproscopy surgery of Asia from 11th to 15th August 2011. From 16th to 19th August 2011 the programme had organized observation fellowship in Urology Department, Singapore General Hospital. During the observation fellowship I had the opportunity to attend Professor K.T. Foo's clinic and Urology ward and Operation Theater.

I have learnt adequate urology from this programme which I shall make use of it in Bhutan and impart the knowledge and skill to my colleagues in my country. During this programme I have made many good urology friends from all over Asia.

I shall fail to my duty if I don't mention about the efficiency of urology secretariat of Singapore General Hospital specially Professor K.T. Foo and his efficient team, Ms. Angie the Secretary of Office. From Professor K.T. Foo I have learnt not only his dealing with the patient and urology but also the philosophy of balance.

This was a great experience for me in Singapore learning about Singapore overall and urology in Singapore General Hospital which I shall always cherish and apply as much as possible in my country. I wish best of luck to the Urology Association of Singapore and Urological Association of Asia to continue the commendable work done in Asia to promote the urological services in all over Asia.

I shall be very happy to join the Association and to contribute whatever possible from my side and my country.

Sonam Dukpa
Sr. Surgical Specialist
